

# What information can I find under my queue's details?

50 Thu, Sep 17, 2020 MAXcallcommand

## Question

What information can I find under my queue's details?

## Answer

The **Queue Details** page contains information regarding the queue. It also contains a schedule section where a schedule can be configured for the specified queue. All schedules will follow UTC (Coordinated Universal Time)

<b>Name</b>	Name of the queue upon creation.
<b>Extension</b>	Assigned extension that will be used to dial into the queue. Extensions for the queue will start at 9600.
<b>Caller Name</b>	Queue name that will be displayed on end device when called or calling.
<b>Caller Number</b>	Number that will be displayed on end device when called or calling.
<b>Max Message Count</b>	Amount of voicemail messages that can be stored.
<b>Max Message Length</b>	Length of time the message will be saved (in seconds.)
<b>SIP Username</b>	Upon creation of the line, it is assigned a SIP username. This is generated automatically for the queue.
<b>SIP Password</b>	Randomly generated authorization password unique to the queue.
<b>Voicemail Password</b>	Assigned 5-digit pin to access the queue's voicemail.
<b>Voicemail Email Forward</b>	Filed that contains an email address that will send a .wav file of the voicemail left in the voicemail box.

**Un-Scheduled Destination** Destination for queue calls to go during the time the schedule does not specify.
