

Sending Fax Messages

9 Thu, Jul 30, 2020 IP Fax

Question

How do I send a fax?

Answer

With Vantage Communications, we offer two ways to send a fax message. These methods are through **email** and our **fax portal**. Below, we will go over both methods.

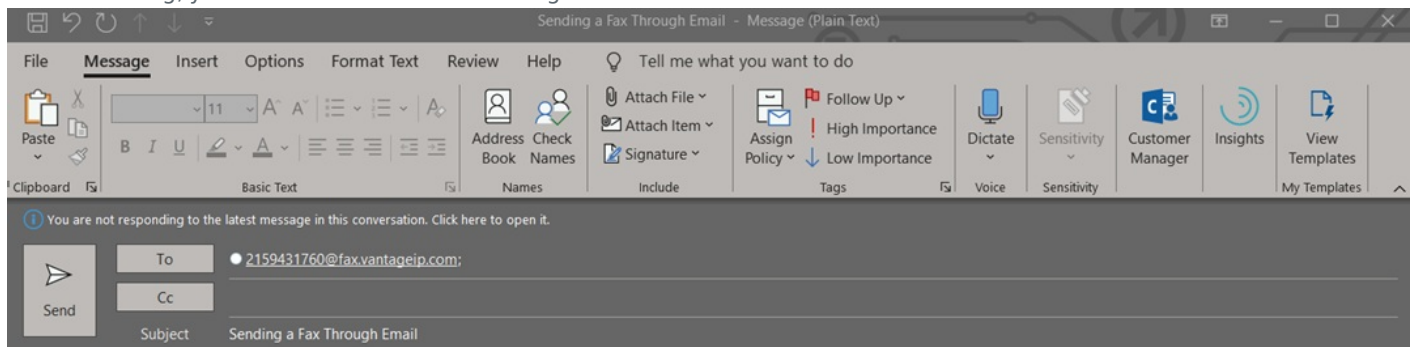

Sending Fax with Email

Open a new email and type the 10-digit fax number followed by @fax.vantageip.com in the *To:* field of your email application. An example of this would be 2155551104@fax.vantageip.com

In the body of the email, you will need to manually type the following with *[password]* being the fax password provided to you by your Admin or our Concierge Team

`@@password=[password]`

Before sending, your email should look something like this:

`@@password=faxpassword123`

Attach the document(s) you would like to fax out and hit send

Sending Fax with the Fax Portal

Sign into the Fax Portal found at <https://fax.vantageip.net>

If you need your credentials or a password reset, dial 611 from your Vantage phone or email customercare@vantage.com for assistance

Click on the Compose Fax button in the top left corner

In the *Name* and *Company* fields, enter this information if applicable. It is not required to fill out these two fields

In the *Fax* field, enter the 10-digit fax number you will be sending a fax to. An example of a valid entry would be 6095557312

Click the *Choose File* button towards the bottom of the page and upload the document(s) you intend to fax. Before sending, your page may look like this:

 Submit

Compose Sender & Company information Options

Recipients
Name:
Company:
Fax:

Cover Sheet
